Doctors

Managing patient records, adding prescriptions, requesting lab and radiology tests, and documenting clinical notes.

Nurses

Nurses can manage patient vitals, administer medications, monitor patient conditions, and update care plans.

Records

This module allows for the creation, updating, and archiving of patient records, including medical histories, treatment plans, and test results.

Radiology

The module allows radiologists to upload, review, and interpret images, and to generate detailed reports that are integrated into patient records

Pharmacy

It allows for the processing of medication orders, tracking inventory, and managing prescriptions.

Laboratory

It facilitates test ordering, sample tracking, and result reporting, allows staff to enter, process, and analyze test samples.

Store

It tracks stock levels, processes orders, and handles procurement and distribution of medical and non-medical items.

Accounts

It handles billing for patient services, processes payments, and tracks accounts receivable and payable.

Admin

Oversees the overall administration and configuration of the system.
